

Dataset:

https://data.cityofnewyork.us/Health/DOHMH-New-York-City-Restaurant-Inspection-Results/43n-n-pn8j/about_data

Questions for Analysis:

1. Which cuisine usually receives the highest inspection grades?
2. Is there a correlation between a neighborhood's borough and its likelihood of not passing a health inspection?
3. Are there hazardous zip codes where the density of violations is far higher than the city average?
4. How has the average score for independent restaurants changed compared to large chains over the past 3 years?
5. What are the most common health violations in New York City?

Potential Client:

A potential client for these questions could be a company in the business of selling or developing real estate or general hospitality services. This is because, by knowing which cuisines or neighborhoods typically struggle with inspections, the client can offer services to their clients or know property valuations based on business inspection data. In addition, this data could be valuable to companies providing business data to consumers, as they could take inspection grades and dates into account.
